

ELASTIC SUPPORT SILENTIUM AE70

The elastic support SILENTIUM AE70 is an accessory destined to guarantee the elastic connection of gypsum board partitioned walls (executed with amounts of 70 mm) faced with structural elements as slabs, whether it's pavement, ceiling and even masonry walls (in the case of wall duplication).

APPLICATION EXEMPLE

MAIN TECHNICAL CHARACTERISTICS

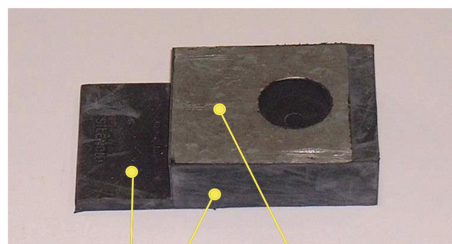

Base material / damper: Black rubber with hardness Shore "A" 40 +- 5

Connection material: Vulcanized steel sheet with 1mm of thickness

Typical application on pavement: From 60 to 60 cm

TYPICAL APPLICATIONS

Elastic support of gypsum board walls, especially using the system with the amount and bridge of 70 mm.

Resilient element in the structure's connection

Vulcanized sheet in connection with the gypsum board's bridge
