(\*) It can (and should) vary in function of the type of involving Wall and the respective dimensional tolerances.

- 1 - Wood coating under steel sheet
- 2 - Lock with key with European cylinder
- 3 - Panel in a dense and vey absorbing plate
- 4 - Metallic frame with absorbing interior

- 5 - Special profile sealant
- 6 - Inox steel aesthetic handle
- 7 - Adequate hinge with vertical tuning
- 8 - Mechanic sealing system of the pavement

VERTICAL CUT

## CHARACTERISTICS

Acoustic door with wood coated sheets, pavement with special profile sealant, floor sealant over the door sheet.

Constituted by a frame in tubular metal and bent sheet, with steel sheets with 1,5 mm of thickness and a core totally filled with absorbent and dampening material.

It includes a lock with a asymmetric European cylinder with a type "Yale" key and special hinges of this model, ensuring a vertical regulation.

## TYPICAL APPLICATIONS

Cabinet entrances, meeting rooms, medical clinics, classrooms, hotel rooms and others, where reasonable levels of acoustic isolation are required.

THICKNESS: 52 mm.

$R_w = 35dB$

ACESSORIES/POSSIBLE OPTIONS (UNDER CONSULTATION):

- Acoustic Visors
- Anti-Panic Bars Springs
- Non-standard woods
- Paintjob finish with RAL to the preferable choice

SUPERFICIAL STANDARD TREATMENT:

- Primary grey color enamel on the frame
- Pore sealant on the wood sheet panel

WOOD GAMMA FOR SHEETS:

- National Pine
- Saprelli Mohagony
- Sucupira
- Izombé
- Beech (vaporized)
- Kambala
- Oak (european)
- White primary
